

### Project 1 Self Critique

My approach to this project began by looking through all the given materials and creating a plan on how I would complete the necessary requirements. First, I began by simply translating the given information into HTML, making sure I made the required navigation parts and having flawless HTML code. I also was adding to the CSS components as needed, but it was not my major focus. Finally, I concluded by focusing on the CSS and trying to improve the website's design.

If I had more time, I would try to improve the color scheme of the website and create a page system (search system) for the text. This would allow the user to be able to find useful information quicker and easier. Overall, I believe this website was a success in that it was my first website I have ever created and I was able to solve the problems I ran into quickly.
